EDUCATION

Bharati Vidyapeeth College of Engineering

Bachelor of Engineering in Electronics and Telecommunications

Relevant Coursework: Database Management Systems (DBMS), Image Processing & Machine Vision, Digital System Design, Microcontrollers

Navi Mumbai, MH

Expected Nov. 2027

EXPERIENCE

MLOps Intern

Dec. 2025 – Present

Hooman Digital

Remote

- Developed core backend infrastructure for ‘InferiaLLM’, implementing uniform software primitives to handle **multi-tenant access control**, dynamic request routing, and **low-latency compute lifecycle management**.
- Architected a modular **Infrastructure Adapter Layer** to abstract heterogenous compute providers, enabling automated, **zero-downtime model deployments** across Kubernetes clusters, SkyPilot Cloud VMs, and decentralized networks like **Nosana and Akash**.
- Engineered a high-throughput Filtration Service incorporating strict role-based access control (RBAC), **distributed Redis-based rate limiting**, and defensive **LLM Guardrails** (LlamaGuard/Lakera) to sanitize and secure model inference pipelines.

Technical Head

Sep. 2024 – Jan. 2025

E-Cell BVCOE

Navi Mumbai, MH

- Led an agile technical team of student developers to build, test, and deploy **highly scalable web platforms** for regional entrepreneurship events.
- Designed curriculum and organized intensive hands-on technical workshops on Full-Stack Development, driving a **40% increase in active student participation** and project submissions.

PROJECTS

Koraku | *Python, FastAPI, Next.js, Supabase, Composio, Docker, SSE*

github.com/meet447/koraku

- Architected and developed an open-source, self-hostable **ReAct-style AI assistant** and personalized “second brain” executing an event-driven loop on a streaming Python backend.
- Engineered a low-latency, bi-directional streaming infrastructure utilizing **Server-Sent Events (SSE)** via FastAPI to transmit granular **multi-step agent thinking trajectories** and tool invocation states to a Next.js interface.
- Decoupled the core LLM execution loop from tool environments by building a **3-tier runtime execution router** targeting cloud sandboxes (Blaxel VMs), single-user host servers, and remote secure local desktops.
- Integrated an automated cron-based automation engine and long-term personalization state machine managing context persistence through custom Markdown state schemas and Supabase.

Chipling.xyz | *Next.js, Supabase, CLIP Models, Vector Embeddings*

chipling.xyz

- Launched a production Visual Discovery Engine serving **500+ active users** with over **2k+ weekly hits**, replacing rigid keyword search with **high-dimensional vector space exploration**.
- Engineered the custom “Ripple” search mechanic using OpenAI **CLIP models** to embed images and text into a shared latent space, executing vector lookups via **cosine similarity**.
- Solved the discovery gap inherent in traditional text indexing by designing a scalable, **context-aware pipeline** for fluid, vibe-based multimedia retrieval.

Domain Hunter | *Python, FastAPI, Docker, OSINT, DNS Tools*

SIH Winner (1st Place)

- Awarded **1st Place** at the national **Smart India Hackathon 2024** for a network recon framework subsequently **acquired by the Madhya Pradesh Police Department** for internal operational use.
- Developed a robust network reconnaissance backend that systematically **uncovers the origin IPs hidden behind reverse proxies** (Cloudflare, Akamai).
- Automated heavy-duty deep DNS history mapping, historical MX/TXT record parsing, and active **HTTP header anomaly inspection** to reduce criminal tracking investigation times drastically.

TECHNICAL SKILLS

Languages: Python, Rust, TypeScript, JavaScript, SQL

Frameworks: FastAPI, Next.js, React, Node.js, Actix-web

Infrastructure & Cloud: Docker, Kubernetes, gRPC, Redis, SkyPilot, Nosana, Akash, Linux SysAdmin, SSE, Git

Libraries & AI: PyTorch, Transformers, OpenAI CLIP, Composio Toolkits, Vector ANN Search (pgvector), pandas
